

IoT

The IoT division offers services and products aimed at improving the quality of life from many points of view: family, home, city, car.

Tippy
Code 8E4610

Anti-abandon pad for children

- **Suitable for any car seat**
- **App dedicated, compatible iOS / Android, manages up to 4 devices**
- **Bluetooth Low Energy technology**
- **Battery life 4 years**

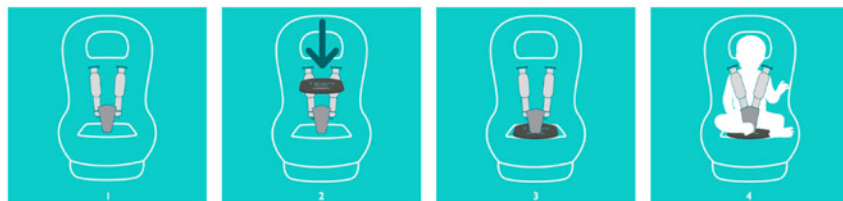

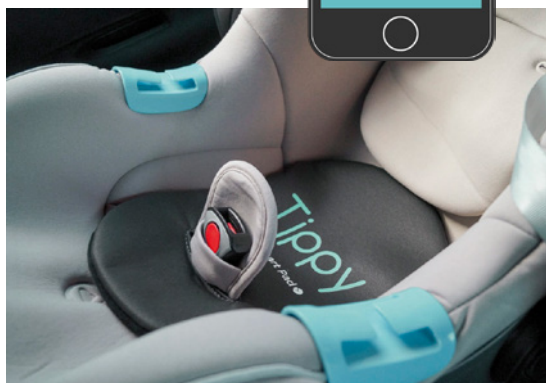

Tippy is an anti-abandonment accessory that applied to the car seat is able **to detect the presence of the child**.

By connecting it via Bluetooth to the smartphone via a dedicated App, Tippy allows the parent to **monitor the child's safety** by preventing the risk of forgetting inside the car.

Once the emergency numbers are memorized, Tippy pad alerts the parent with a notification (alarm on the smartphone) in case it goes away leaving the child inside the car.

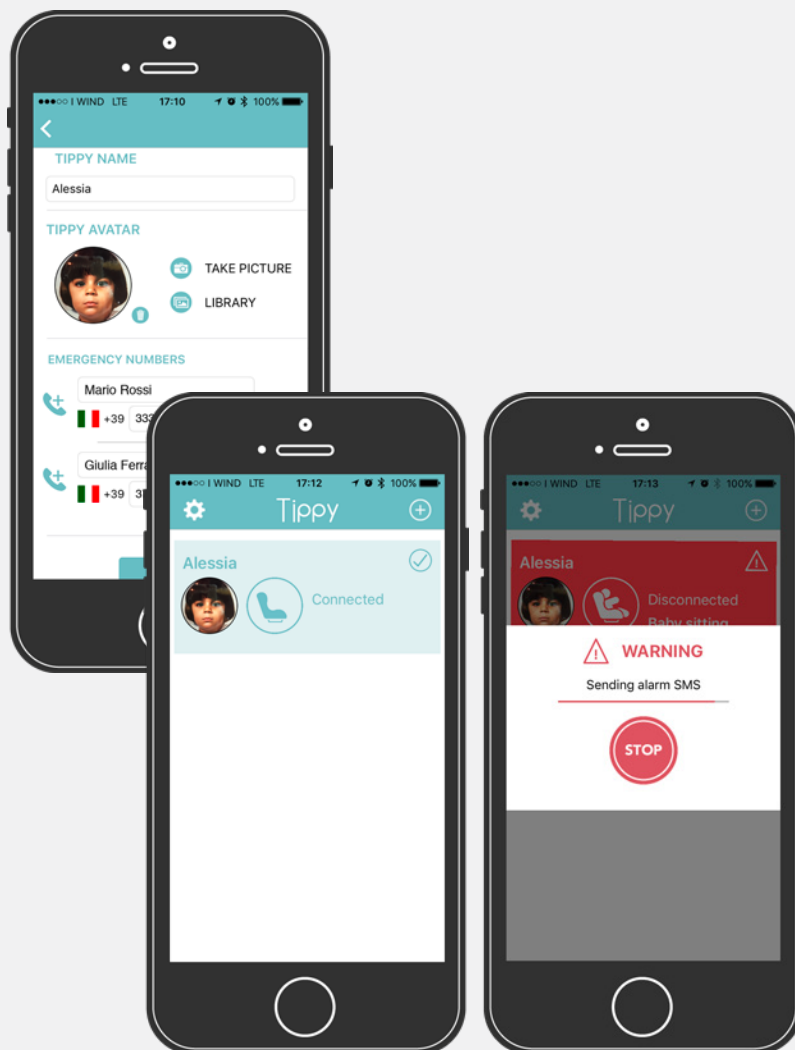

In case of non-response to the notification, it allows you to send an SMS to the preset telephone numbers indicating the geographical coordinates of the car, creating a real rescue network.

It is important that geolocation services are always enabled, as if this were not the case, the application would not be able to provide all the necessary information concerning the position of Tippy.

TECHNICAL FEATURES

- Bluetooth Low Energy Communication Technology
- Battery life 4 years (average two hours per day)
- Possibility to manage up to 4 devices
- Application Compatible with IOS and Android system
APP versions Android 5.0 – IOS 10.0 and higher
- Removable and washable fabric
- Made in Italy product
- Product complies with European regulations
- Tippy pressure sensor is registered as
INTERNATIONAL PATENT APPLICATION PENDING WO / 2018/134724
